CONTENTS OF VOLUME 34

NUMBER 1

Obituary	1	P. B. Mellor
S. Kyriakides and Y. C. Chang	3	On the effect of axial tension on the propagation pressure of long cylindrical shells
S. A. Meguid and C. L. Shen	17	On the elastic fields of interacting defense and main hole systems
J.-D. Yau, Y.-B. Yang and S.-R. Kuo	31	Stability of tapered bars of circular cross-sections under semi- and quasi-tangential torques
Y. Xiong and B. Tabarrok	41	A finite element model for the vibration of spatial rods under various applied loads
R. M. McMeeking	53	The analysis of shape change during isostatic pressing
O. G. McGee, A. W. Leissa and C. S. Huang	63	Vibrations of cantilevered skewed trapezoidal and triangular plates with corner stress singularities
C. W. Bert	85	Letter to the Editor
Announcements and Call for Papers	87	

NUMBER 2

L. Tong and T. K. Wang	93	Simple solutions for buckling of laminated conical shells
A. P. Karafillis and M. C. Boyce	113	Tooling design in sheet metal forming using springback calculations
U. Güven	133	Elastic–plastic stresses in a rotating annular disk of variable thickness and variable density
J.-Y. Lee and P. S. Symonds	139	Extended energy approach to chaotic elastic–plastic response to impulsive loading
X. Chen and R. Sowerby	159	The development of ideal blank shapes by the method of plane stress characteristics
J. Xu and R. M. McMeeking	167	An analysis of the can effect in an isostatic pressing of copper powder
Announcements and Call for Papers	175	

NUMBER 3

L. G. Sukhomlinov, V. K. Engelsberg and V. N. Davydov	179	A finite element membrane model for the analysis of axisymmetric sheet metal forming processes
P. Gratacos, P. Montmitonnet, C. Fromholz and J. L. Chenot	195	A plane-strain elastoplastic finite-element model for cold rolling of thin strip
S. F. Hoysan and P. S. Steif	211	A streamline-based method for analysing steady state metal forming processes
A. Kapoor and K. L. Johnson	223	Effect of changes in contact geometry on shakedown of surfaces in rolling/sliding contact
G. Cederbaum	241	Analysis of parametrically excited laminated shells
Announcement and Call for Papers	251	

NUMBER 4

N. K. Lee, J. H. Yoon and D. Y. Yang	255	Finite element analysis of large deformation by automatic renoding as a weak remeshing technique
L. E. Becker and W. L. Cleghorn	275	On the buckling of helical compression springs
H. S. Yang and A. K. Mukherjee	283	An analysis of the superplastic forming of a circular sheet diaphragm
K. M. Liew	299	Vibration of symmetrically laminated cantilever trapezoidal composite plates
S. R. Kalidindi and L. Anand	309	An approximate procedure for predicting the evolution of crystallographic texture in bulk deformation processing of fcc metals
Announcement	331	

NUMBER 5

T. M. Roberts and K. W. Yeung	333	Torsion and bending of braced thin-walled open sections

J.-L. Yang, Y. Zhang and Z.-M. Zhang 345 Nonlinear stability analysis of infinitely long laminated cylindrical shallow shells including shear deformation under lateral pressure

N. M. Bujurke and H. P. Patil 355 The effects of variable permeability and roughness of porous bearings

P. P. Date and K. A. Padmanabhan 363 On the prediction of the forming-limit diagram of sheet metals

K. L. Johnson and H. R. Shercliff 375 Shakedown of 2-dimensional asperities in sliding contact

M. A. Diez and L. A. Godoy 395 Viscoplastic incompressible flow of frictional-cohesive solids

NUMBER 6

M. E. Larsen 409 Aqueous foam mitigation of confined blasts

F. Romano and G. Zingone 419 Deflections of members with variable circular cross-section

T. L. Zaharoff, R. E. Johnson and M. E. Karabin 435 Spread in sheet rolling: a comparison using experiments, analytical solutions and numerical techniques

B. Mustafa, S. Li, P. D. Soden, S. R. Reid, C. M. Leech and M. J. Hinton 443 Lateral indentation of filament wound GRP tubes

C. Xu 459 Multi-mode nonlinear vibration and large deflection of symmetrically laminated imperfect spherical caps on elastic foundations

J. Zhang and M. F. Ashby 475 The out-of-plane properties of honeycombs

J. Zhang and M. F. Ashby 491 Buckling of honeycombs under in-plane biaxial stresses

NUMBER 7

K. M. Liew 511 Frequency solutions for circular plates with internal supports and discontinuous boundaries

D. A. Korzekwa, P. R. Dawson and W. R. D. Wilson 521 Surface asperity deformation during sheet forming

S. B. Padwal and R. C. Chaturvedi 541 Prediction of forming limits using Hosford's modified yield criterion

W. Jiang, T. L. Wang and W. K. Jones 549 The forced vibration of helical springs

L. T. Kuhn and R. M. McMeeking 563 Power-law creep of powder bonded by isolated contacts

K. Chung and O. Richmond 575 Ideal forming—I. Homogeneous deformation with minimum plastic work

Announcement and Call for Papers 593

NUMBER 8

D. Dang and F. J. Wallace 595 Some single zone scavenging models for two-stroke engines

A. W. Leissa and N. A. Jaber 605 Vibrations of completely free triangular plates

K. Chung and O. Richmond 617 Ideal forming—II. Sheet forming with optimum deformation

V. Tvergaard 635 Effect of ductile particle debonding during crack bridging in ceramics

W. Johnson 651 Encounters between Robins, and Euler and the Bernoullis; artillery and related subjects

NUMBER 9

C. M. Wang, K. M. Liew, Y. Xiang and S. Kitipornchai 681 Application of Trefftz theory in thin-plate buckling with in-plane pre-buckling deformations

J. H. Yoon, N. K. Lee and D. Y. Yang 689 Treatment of contact traction at the die–workpiece interface for the elastic analysis of die deformation

A. Bhimaraddi 703 Buckling and post-buckling behavior of laminated plates using the generalized nonlinear formulation

C. Rajalingham, R. B. Bhat and G. D. Xistris 717 Influence of support flexibility and damping characteristics on the stability of rotors with stiffness anisotropy about shaft principal axes

E. Ore and D. Durban 727 Elastoplastic buckling of axially compressed circular cylindrical shells

W. Johnson 743 Voltaire's *Micromegas*: a philosophic *Conte* about scale

Announcement and Call for Papers 759

NUMBER 10

T. Y. Reddy 761 Guist and Marble revisited—on the natural knuckle radius in tube inversion

O. J. A. Gonçalves Filho 769 Creep-rupture behaviour of a cruciform specimen under equal triaxial tension

F. Lu and A. N. Sherbourne 789 Shear-bending interaction for strain-hardening beams

A. N. Kathnelson 805 High eigenfrequencies of non-uniform Bernoulli–Euler beams

E. Kimmel 809 Elastic and dissipative moduli of pressure-supported cellular substances

S. Liu 817 Improvement of analytical dynamic models using complex modal test data

W. Johnson 831 Letter to the Editor

NUMBER 11

N. N. Chitkara and M. A. Butt 833 A general numerical method of construction of axisymmetric slip-line fields

N. R. Chitkara and M. A. Butt 849 Numerical construction of axisymmetric slip-line fields for indentation of thick blocks by rigid conical indenters and friction at the tool–metal interface

J. Groß-Weege and D. Weichert 863 Elastic-plastic shells under variable mechanical and thermal loads

M. G. Boyarshinov, M. B. Gitman and P. V. Trusov 881 A method of solution for the cyclic bending problem

A. Seweryn 891 Analysis of axisymmetric steady-state extrusion through dies of large-cone angle by the slip-line method

B. Skoczeń and J. Skrzypek 901 Application of the equivalent column concept to the stability of axially compressed bellows

NUMBER 12

D. E. Winterbone and R. J. Pearson 917 A solution of the wave equations using real gases

S. X. Gong and S. A. Meguid 933 Microdefect interacting with a main crack: a general treatment

B. Singh and S. Chakraverty 947 Transverse vibration of triangular plates using characteristic orthogonal polynomials in two variables

J. G. Parkhouse, H. R. Sepangi and W. E. Williams 957 Structural simplicity through a lenticular pattern

S. M. Hwang and M. S. Joun 971 Analysis of hot-strip rolling by a penalty rigid-viscoplastic finite element method

M. S. Joun and S. M. Hwang 985 An approximate analysis of hot-strip rolling—a new approach

Announcement 999

i Index for Volume 34, 1992
